Task 26

Deploy Bastion-less Architecture
Remove Bastion host
Use:

- Systems Manager Session Manager
  Configure IAM role
  Connect to private EC2 without public IP

In the last task we ssh through public ip . Now we will try ssm session.

Session Manager usage:
Connect to your instance without SSH keys, a bastion host, or opening any inbound ports.
Sessions are secured using an AWS Key Management Service key.
You can log session commands and details in an Amazon S3 bucket or CloudWatch Logs log group.
Configure sessions on the Session Manager Preferences page.

Just-in-time node access Info
Enable just-in-time node access
Just-in-time node access helps you remove long-standing permissions to nodes while maintaining operational efficiency. You can move towards zero-standing privileges by requiring operators to request access to Amazon EC2, hybrid, and multicloud nodes managed by Systems Manager.
Setting up just-in-time node access
Enable just-in-time node access
Enable just-in-time node access for Organizations or a single account and Region.
Configure just-in-time node access
Create policies that define the approvals required to access your nodes. Choose which users, groups, or roles can approve requests to access your nodes.
Request access to nodes
Request time-bound access to nodes when you need it. Approve and gain access to nodes only when authorized.
Benefits and features
Remove standing access to nodes
Move towards zero-standing privileges by requiring operators to request access to nodes.
Record Remote Desktop Protocol sessions
Record Remote Desktop Protocol (RDP) sessions, helping you meet compliance requirements and assisting you with root-cause analysis.
Fine-grained access controls
Create policies that require manual approval, or use automated approvals, when connecting to your managed nodes. This helps you improve your security posture, while increasing operational efficiency.
Pricing
Free trial
Just-in-time node access has a free trial per account and AWS Region. To learn more about the free trial, visit Just-in-time node access pricing
Pricing
Just-in-time node access is a priced feature, priced per node per hour. For more details on pricing, visit Just-in-time node access pricing
