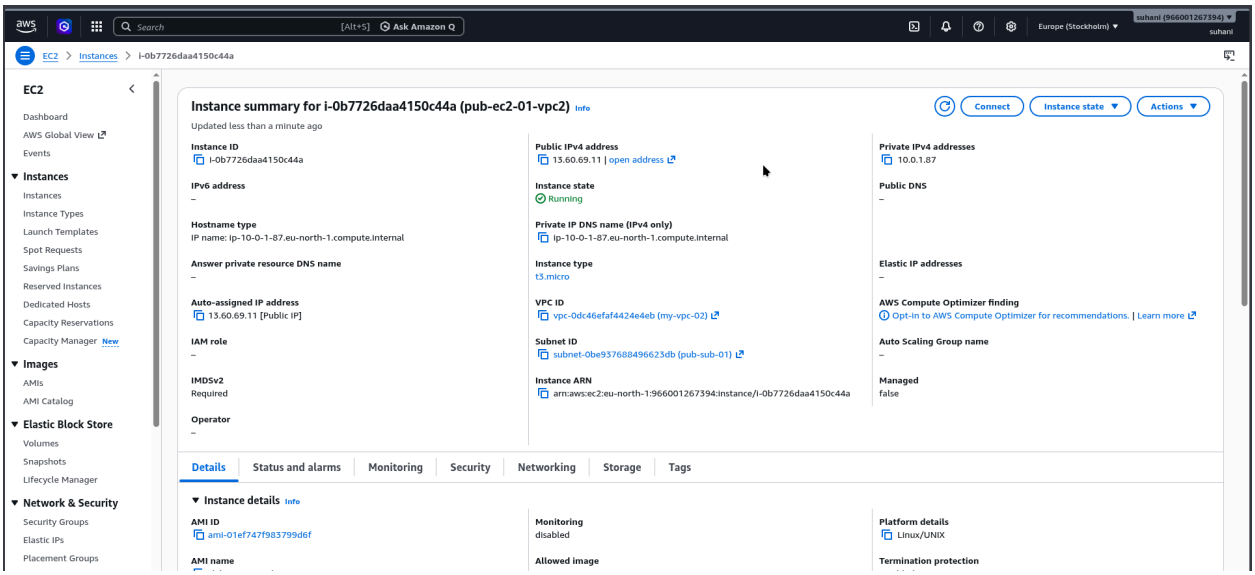
Task 7

Establish path based routing using load balancer:

Domain.com/videos → Should go Target group with videos. Domain.com/images → Should go Target group with images.

1. Create ec2 instance in a VPC .[Using VPC and public ec2 from Task3]



2.

Lattice: Target groups
Create target group
Step 1
Specify group details
Step 2
Register targets
Register targets
You can register targets now or anytime after the target group is created. However, to successfully route requests, you must register targets.
Register Application Load Balancer
You can specify a single Application Load Balancer as the target.
Register now
Register later
